

A Gibb Knowledge Base Article

What is Gibb Green?

Gibb Green is a cleaning process that is a holistic approach to janitorial services that takes into account the health, safety, and environmental risks of products and processes associated with cleaning. Gibb Green cleaning is more than simply using environmentally friendly products. It is a unique combination of new tools and practices that can be applied to traditional cleaning methods and targeted to specific risks associated with each building.

"The Environmental Protection Agency has determined that indoor air quality is 2 to 45 times worse than outdoor air, and can be as much worse as 100 times worse."

How Does Gibb Green Work?

Protecting the health of building occupants is one of the primary goals of Gibb Green. This includes the identification and removal of harmful contaminants, such as particulates, mold spores, bacteria, and viruses. Dusty workplaces are associated with increased frequency of nasal congestion, throat symptoms, dizziness and skin irritation. A Gibb Green Program can address these obstacles and others by improving air quality, reducing health effects and reducing negative impacts on the environment. Gibb Green cleaning results in a safer, healthier, and cleaner environment for you, your employees and clients visiting your business. It's an excellent investment with a tangible return measured in the productivity and well being of your employees, and the future of our planet.

The Gibb Green Program implements the use of HEPA and / or high filtration vacuums that remove and hold dust particles down to 3 microns with a 99.97% efficiency. Gibb Green also implements the use of microfiber dust cloths, dust mops, and wet mops. The implementation of these microfiber products capture and hold dust much more effectively than non-microfiber products.

"The Environmental Protection Agency has made the connection between indoor air quality and cleaning, and quantified its impact at \$60 billion of lost productivity."
